Milne
MicroDried®

Healthy, Organic, Clean-label Ingredients

Milne MicroDried® offers 100% pure, organic fruit ingredients with bold rich colors and natural taste in eight different organic varieties. These organic fruit ingredients offer a clean, single ingredient label with no added sugars, color, preservatives or additives of any kind.

These healthy ingredients use the whole fruit – skin and seeds to maximize antioxidants and phytonutrients. Each organic fruit variety brings natural fiber, protein and antioxidants to consumer products and is low in fat, sodium and cholesterol.

In addition, MicroDried's farming and production facilities are certified organic by the Washington State Department of Agriculture in accordance with USDA organic regulations each year and have the capacity to assure dependable industrial volumes of organic fruit ingredients.

These clean label, organic fruit ingredients appeal to today's health conscious consumers. And, they are GMO, gluten and allergen free and simply healthier than many traditional options.

Different Pieces, Endless Applications

Available in whole pieces, chewy and crunchy fragments and coarse or fine grind powders, Milne MicroDried® organic fruit ingredients can be used in an endless number of new product applications for today's discerning consumer.

Traditional and organic MicroDried fruit ingredients are available in different moisture levels and textures and can be sized for a full range of product applications.

Innovative Process & Customization

Milne MicroDried's innovative new dehydration process uses organic fruit and a proprietary, patented, low impact vacuum drying technology to preserve most of the fruit's natural vitamins and minerals while retaining superior flavor, texture and color in comparison to other dried ingredients.

Produced with no added sugar, color or preservatives, the ingredients can be customized by piece size, moisture levels, water activity and texture – chewy or crunchy.

Two or more varieties can be blended to create new flavor and color combinations or can be compounded with sweetening or flowability agents as part of the customization process.

In Development . . .

Legumes, Pulses, Lentils, Beans & More

As consumers demand healthier products, Milne MicroDried® has in development other dried varieties such as legumes, pulses, lentils and beans. These new ingredients are high in dietary fiber, protein, vitamins and minerals, yet low in fat.

Pulses are part of the legume family and the seeds found in beans, lentils and chickpeas that serve as healthy ingredients in consumer products.

Milne MicroDried green and red lentil ingredients offer good to excellent amounts of seven important minerals, B-vitamins, and protein – all with virtually no fat.

Other exciting new varieties recently introduced include dried red bell peppers and wine varieties such as chardonnay, riesling and merlot – all with no added sugar, color or preservatives.

MicroDried®

Organic Whole (Red) Lentils

Currently, whole red lentils are the only organic vegetable offered by Milne MicroDried®. If you are interested in a particular organic dried fruit or vegetable, Milne MicroDried has procurement capabilities to source a wide variety of organic produce from around the world to meet your needs. In addition, Milne MicroDried® is also doubling plant capacity to ensure dependable industrial volumes of conventional and organic dried ingredients.
